

Roberto Carlos Pineda Tabarez

Front End Developer

roberts.pineda.rcp@gmail.com

767-106-5422

Address: Ciudad Altamirano, Guerrero, México, C.P. 40660

About Me: I am a Computer Systems Engineer with over 7 years of experience in Front-End development, specializing in Angular and modern web technologies. I have collaborated on projects for the banking and corporate sectors, leading the creation of high-quality user interfaces, responsive design, and visual optimization, always aligned with design tools like Figma, Adobe XD, and Photoshop. I have experience developing hybrid mobile applications using Ionic + Angular, creating responsive, functional, and optimized interfaces for Android and iOS platforms. I utilize Capacitor to emulate multi-platform hybrid apps.

Professional Profile of Interest: I am interested in taking on the role of Angular Front End, focusing on the continuous improvement of user experience and data visualization. I adhere to the best programming practices and standards established by the organization. Additionally, I am seeking certification in Front End Development to complement my training in this field.

Education

Bachelor's Degree in Computer Systems Engineering
Instituto Tecnológico Superior de Huetamo, Michoacán

2011 – 2016

Languages

Spanish
English

Native
B1 Conversational

Courses

- Leadership Mindsets
- TypeScript: Tricks
- JavaScript: TDD and Unit Testing Essentials
- Digital Marketing Basics
- REDUX with NgRx
- Cybersecurity at Work
- Introduction to Web Development
- Development of secure web applications and services
- **Ionic 6:** Create iOS, Android Applications with **Angular**
- Certificate in Teamwork
- Modern Angular 19 Course

Technological Knowledge

Software

JavaScript – 6 years
PHP – 1 year
NodeJS – 3 months
Angular – 6 years
RxJS – 3 years
TypeScript – 6 years
HTML5 – 7 years
CSS3 – 7 years
SASS – 3 years
Bootstrap – 7 years
Jquery – 2 years
Ajax – 6 months
Angular Material UI - 6 years
Ionic - 2 years
React – 2 months

Platforms

Linux - Low level
NetBeans – Intermediate level
MobaXterm – Intermediate level
iReport – Advanced level
Google Analytics – Advanced level
Google Optimize – Advanced level
Jenkins – User
Git – Advanced level
Maven – Advanced level
OpenShift – User
SVN – Intermediate level
MS Project – Intermediate level
Jira – Intermediate level
Confluence – Low level
Marvel App – Intermediate level
Figma – Intermediate level
Adobe XD – Intermediate level
Photoshop – Intermediate level
Illustrator – Intermediate level
Zeplin - Intermediate level

Data

MySQL – 2 years
Oracle – 1 year
SQL Server – 2 years
MongoDB – 6 months

Work Experience

SENIOR CONSULTANT

Indra/Minsait

Sept 2024 – Current

Santander Bank/ Loyalty Project Angular v18.2.1

As a key member of the team, I was responsible for the creation and configuration of a new project on the latest Angular version (v18), including the installation of all necessary dependencies and the specific libraries of Santander Bank. I developed components, interfaces, services, constants, pipes, and routes, and designed both core and shared views. The project required the integration of the bank's UI FLAME, and I executed the layout based on the Figma designs. Furthermore, I integrated third-party dependencies such as Moment and sweet-alert for handling dates, filtering, pagination, and searching. My work also involved the integration of a JSON service for data management, the creation of data forms, and the visualization of data in the view, applying responsive design to ensure it operated seamlessly on the bank's mobile application.

- Wrote clean, well-documented, and well-tested code.
- Designed screen interfaces.
- Adhered to programming best practices.
- Consumed JSON services using TypeScript.
- Managed application routing and navigation.
- Utilized npm for the installation of additional resources and plugins.
- Executed layout according to UI FLAME.
- Managed pull requests and error handling in the release train.

Technologies: Angular v18.2.1, HTML5, CSS3, TypeScript, RxJS, Swagger, Zeplin, Figma.

Work Experience

CI-BANCO – Gestor Documental - Angular v17.3.4

I analyzed and set up the project with Angular 17, including all necessary dependency installations. I created components, interfaces, services, constants, pipes, routes, and view layouts, as well as shared components. The project integrated Bootstrap v5.2.3, RxJS, and Angular Material, along with key npm plugins like crypto-js and @ngrx for robust application state management and data access. I also utilized other plugins, such as Moment.js, for handling dates, filtering, pagination, and searching. The role included the full integration of services and data forms, culminating in the effective display of data in the view.

- Write clean, well-documented, and well-tested code.
- Layout of screen interfaces.
- Best practices of programming
- Collaborate closely with the core team of engineers, product managers, and UX designers to implement new features and critical bugs.
- Creation of services with TypeScript.
- Routing (Navigation) of the application.
- Use of npm for the installation of additional resources or plugins.
- Password encryption.
- Profile management for the application.
- Documentation of User and Technical Manuals for the application.

Technologies: Angular v17.3.4, Bootstrap 5.2.3, HTML5, CSS3, TypeScript, RxJS, Swagger, Zeplin, Figma.

AXA – Ad Hoc Reports

Technological Migration from AngularJS to Angular v15.2.8

Analysis and project setup with AngularJS, including dependency installation. The base project for migrating to Angular v15.2.8 with Node 18.15.0 involved replacing JSP with components, interfaces, services, constants, pipes, routes, and layout of views, as well as shared components. Integration was completed with Bootstrap v5.2.3, RxJS, and ngx-spinner, as well as npm plugins such as DataTables and Moment for date handling, and FileSaver for downloading .xlsx and .csv files, managing large datasets. DataTables were used for data visualization, filtering, pagination, and searching. Integration of services, data forms, and displaying data in the view.

Layout was based on previous screens, achieving an exact replica with improvements using new technologies.

Testing of services in Postman, review of data models and interfaces, visualization with Swagger. Service requests with HTTP, creation of promises, observables, and sharing data between components, using various RxJS operators. Application routing.

Technologies: AngularJS, Angular v15.2.8, Bootstrap 5.2.3, HTML5, CSS3, TypeScript, RxJS, Swagger, NodeJS, MongoDB.

Santander – Supermobile – ClicktwoSell (C2S)

As a consultant, I created mockups based on the designs provided in Figma and Miro. I developed the data model with classes or interfaces for safe data typing, following documented best practices. I also created unit tests for new components, implemented calls to microservices and business logic, and managed data binding to the view. Additionally, I modified and created reusable components and used iOS and Android emulators for debugging the app.

- **Home Insurance (Product Development)**
- Implementation of geolocation features in the products.
- **Blindaje Insurance and Hospitalization Insurance (Flow Improvements)**
- Addressing production issues.
- Implementation of Google Optimize.
- **LikeU Credit Card (Product Development)**
- Development of new products for migration to the New Santander Mobile (Angular 7 to 9).

Technologies: Angular 7,9,11, Bootstrap, HTML5, CSS3, TypeScript, Swagger, Google Analytics and Google Optimize.

Santander Mobile(One Pay) – International Transfers

I began collaborating on the OnePay project for Super-Mobile at Santander, making changes to the views and copy, conducting unit tests on the developed components, integrating mock data to display information in the views, and integrating services. I created pipes for data transformation, performed validations, and made calls to microservices in DEV for high-level operations, general inquiries, detailed inquiries, and modification and deletion of international beneficiaries. Additionally, I am involved in the Taggeo project for the entire Super-Mobile application, sending data to Google Analytics using Tealium.

- **Business Requirements Analysis**
Analyzing business requirements to calculate time and impact on the development, delivery, and subsequent implementation of the OnePay operation.
- Creation of views according to the design provided by the UX team for visualization and flow tracking.
- Consumption of microservices: Beneficiary Registration, Country Inquiry, Beneficiary Editing, and International Beneficiary Inquiry.

Within the project, I was also involved in:

- Data consumption and application of business rules.
Creation of the data model using classes and interfaces for better data typing according to the service response.
- Unit testing with Jasmine and Karma within Angular, adhering to an 80% rule for approval.
Documentation of best programming practices with Angular.

Technologies: Angular 7, TypeScript, JavaScript, HTML5, CSS3, RXJS, Jasmine/Karma

DESARROLLADOR FRONT END
SENIOR

PRAXIS México

Mar 2016 – Dic 2019

Fundación Carlos Slim – Electronic Vaccination Record for Vacunación

I participated in the entire development of the project, from gathering requirements to joint testing and product delivery with the client. Massive testing was conducted, and with the help of Google Analytics, we were able to gather metrics to verify the accuracy of the information.

- **Creation of Interfaces using HTML5, CSS3, SASS, Angular Material 8.1.4, Bootstrap 4.3.1, and TypeScript 3.4.5**
- Implementation of Google Analytics with Angular, with a dashboard created using a Google account provided by the client.
- Creation and mapping of Action-Button-View for tracking visualization.
- Consumption of web services from REST APIs (NodeJS and MongoDB) including integration and validations using TypeScript.
- Creation of web components.
- Management of LocalStorage and SessionStorage for temporary data storage.
- Creation of services with TypeScript.
- Development of data models with classes or interfaces for data typing.
- Routing (Navigation) of the application.
- Use of npm for the installation of additional resources or plugins.
- Password encryption.
- Profile management for the application.
- Documentation of User and Technical Manuals for the application.

Technologies: Angular CLI: 8.3.1, Bootstrap 4.3.1, HTML5, SASS, NodeJS

Grupo Bepensa – Bepensa Web Administrator

The look and feel of the web admin was created following a design provided by the UX team in Adobe XD. We interacted with the tool and developed a prototype in MarvelApp to give the client an idea of how the application would look and to obtain the go-ahead for the app's development.

- Creation of Interfaces using HTML5, CSS3, LESS, SASS, Angular Material 6.4.7, and Bootstrap 4.1.1
- Well-integrated responsive design adaptable to different screen resolutions.
- Consumption of web services from Amazon WS, including validations using TypeScript and Angular 6.
- Unit testing with the Testing team.
- Correction of bugs identified by Testing.
- Creation of User and Technical Manuals for the application.

Technologies: Angular Material: 6.4.7, Bootstrap 4.1.1, HTML5, TypeScript, AdobeXD.

Praxis (Mobile Solutions Management) – Mercamóvil

I participated in the internal project for the Mobile Solutions Management at Praxis Mexico. This involved migrating the system to newer technologies and implementing responsive design. I created the web design for the new version 2.0 of MercaMóvil, a mass messaging system that operates through various channels such as Email, SMS, and PUSH. This included a change in look and feel.

- Customizing the web template to align with the colors and typography used internally by the company.
- Well-integrated responsive design adaptable to different screen resolutions using Bootstrap 3.3.7.
- Utilization of jQuery and JavaScript, employing new methods for calling new functionalities.
- Integration of the template with JSP on the backend.
- Integration of new plugins such as Highcharts, HighMaps, jQuery.mCustomScrollbar, Image-picker, and DataTables.
- Unit testing with the Testing team.
- Addressing and correcting bugs identified by the Testing team.

Technologies: JSP, Bootstrap 3.3.7, HTML5, CSS3, JavaScript, JQuery, Plugins.

Praxis – Project Office Area

Server Monitoring

Monitoring servers using tools such as New Relic and Nagios. Proficient in Linux commands, including filtering, searching logs, and file creation. Creation of reports in XLSX, PDF, iReport, and Jasper Server. Development of VTL and HTML templates, as well as VML (to visualize templates in different web browsers).

- **Team Leader of the Front-End Design Team**
- Leading the design team for the application (creating responsive layouts/windows, styling with CSS3, color schemes, responsive web design, and user experience).
- Creation of standard reporting formats using tools like iReport and Pentaho.
- Defined styles in CSS and XML for reports.
- Development of a project office website using Bootstrap, HTML, CSS3, and jQuery.
- Creation of icons in Adobe tools (Photoshop, Illustrator) for the mobile application.
- Integration of reporting servers within the website, such as MicroStrategy, PentahoServer, and JasperServer.

Technologies: Bootstrap 3.3.7, HTML5, CSS3, JavaScript, JQuery, PentahoServer, JasperServer, MicroStrategy, Photoshop e Illustrator.
